

Gorgeous

Making every day, a
gorgeous day.

HELLO, GORGEOUS

Taking inspiration from President John F. Kennedy's Moonshot that united a community of millions to one common goal, put man on the moon. Similarly, the Gorgeous Moonshot is centred around the simple but ambitious goal to unite a community and make the world a little more gorgeous.

Driven by a desire to make a difference together, Gorgeous is the philanthropic and charitable vehicle that will take us to the moon, develop the foundations to support those that need a little more Gorgeous in their lives, and highlight the ability of human ingenuity to bring about change.

Let us come together, inspiring continuous action for future generations of charity tokens to come, making every day a Gorgeous day.

GORGEOUS TAKEAWAYS:

- Here to unite a community and together support those that need it.
- The philanthropic and charitable vehicle that will take us to the moon.
- To inspire continuous action for future generations of charity tokens to come.

INTRODUCTION

Welcome to the Gorgeous whitepaper v1.0.0. In this document, you will find details that outline the fundamentals of this contract, along with our use cases and long-term goals. As the project progresses, this document will be extended to ensure transparency within our community.

Be sure to keep updated with the pinned messages in our Telegram group (<https://t.me/gorgeoustoken>) for future versions of this whitepaper.

OUR VISION

A world where the previous day is a little more gorgeous than the last. Both for the individual token holders in our community and those we choose collectively to support.

OUR MISSION

The Gorgeous token was created to facilitate the development of several innovative solutions to real-world problems.

Using a combination of technology and strategic partnerships, our mission is to produce a viable yield generating token for our community, whilst funding the services and applications required to support those in need.

OUR CORE VALUES

The Gorgeous core values are forged by our commitment to the highest

ethical standards. Our reputation as a token is the ultimate asset, and these core values guide our behaviors, judgments, and how we accomplish our mission.

To our community of holders, we promise:

- To return your trust with transparency across all aspects of our operation.
- To secure partnerships that not only help us achieve our goals but yours too.
- To make decisions that yield the best return from your investment in us.
- To redefine what a community expects from its development team based on your requirements as a whole.
- To lead through innovation, maximize technology to its fullest, and relentlessly increase our knowledge.
- To operate in a spirit of inclusiveness and provide the opportunities and forums for our stakeholders to be represented and heard.

To the organisations and causes that our token supports, we promise:

- To be positive ambassadors to your organization.
- To respect your requirements and develop products that help you achieve your vision.
- To maintain transparency in our relationships with each other and with our constituencies.
- To keep our commitments and make measurable progress to achieve our missions together.

CONTRACT: 0XFE1179267621899D85E6EDDC0DC9BF9345FB5E55

TOKENOMICS

OVERVIEW

- **Symbol:** \$GORGEOUS
- **Decimals:** 9
- **Total supply:** 100,000,000

Gorgeous is a frictionless, yield-generating smart contract that allows our community to earn from each transaction whilst refinancing pools for charity and project operations.

Additionally, every transaction contributes a fee to liquidity and the burn wallet, essentially increasing the token's value.

Combined, the Gorgeous contract remains virtually rug-proof and added with the maximum buy and hold limits; large stakeholders will be deterred from dumping their tokens.

Simply, Gorgeous rewards those that hold their tokens.

CONTRACT TAKEAWAYS:

- **The community of holders earns on every transaction.**
- **The contract remains virtually rug-proof.**
- **Large stakeholders are deterred from dumping large amounts of tokens.**

SECURITY OF YOUR INVESTMENT

- **The ownership was renounced after liquidity was added to Pancakeswap.**
- **The manager was renounced after liquidity was added to Pancakeswap.**
- **Liquidity was locked until 1/1/2100 on DxLock.**
- **The contract is verified on BscScan, and the source code is publicly available on Github (github.com/higorgeous).**
- **Liquidity is generated on every transaction.**

SUPPLY

The Gorgeous token has a maximum supply of 100,000,000 tokens. Prior to launching, we,

- **Burnt 61.8%.**
- **Sold 14.1% in our presale.**
- **Sent the charity wallet with 4%.**
- **Sent the project wallet with 4%.**
- **Sent the team wallet with 2%.**
- **Added 14.1% to liquidity on Pancakeswap and locked until 1/1/2100 on DxLock.**

PRESALE

Before launch, Gorgeous raised 17 BNB in a private presale, allocating 14.1 million tokens across 15 wallets.

The funds raised during the sale became the starting liquidity added to Pancakeswap and locked to with DxLock.

REDISTRIBUTION

During any transaction, whether buying or selling, the Gorgeous contract deducts 15% for redistribution among 5 functions:

- **Reflection of 4% that is redistributed among token holders.**
- **LP receives 4%.**
- **Charity wallet receives 3%.**
- **Project wallet receives 3%.**
- **The remaining 1% is burnt.**

AUTOMATIC LIQUIDITY SWAP

During transactions, the 4% liquidity fee can reduce the impact when Gorgeous tokens are sold.

During token purchases, half of the liquidity fee is swapped for WBNB and added back to Pancakeswap; the remaining half is pooled within the renounced contract as Gorgeous tokens.

However, when tokens are sold, if the liquidity pool contains more than 0.1% of the total token supply (100,000), on the next transaction, the tokens are swapped for WBNB and added back to the liquidity in Pancakeswap.

The liquidity swap mechanism holds the market cap and ensures we climb steadily when Gorgeous is being pumped, even if tokens are being sold.

MAX BUY/MAX HOLD

Limiting the buys and holds allows maximum stability and security, removing the monopoly and offering fair transactions. Bridging the gap within our community, growing as one.

- **The maximum transaction is 1%**
- **The maximum amount allowed to be held in a wallet is 4%, excluding the reflection that is collected during redistribution.**

WALLET: 0XE2377D5B852CE0B8995C31B201699C31D8566A0B

CHARITY WALLET

A fundamental goal of the Gorgeous token is to help lead an ecosystem that positively impacts society as a whole, making the world a little more Gorgeous.

By implementing a 3% charity transaction fee, Gorgeous yields a material amount of tokens to be traded, sold into the liquidity, and donated to community-polled charities through either active donations (e.g. WFP, WWF, SNAP) or passive donations (e.g. sourcing medical supplies, building homes, providing care packages).

COMMUNITY VOTE

Voting by the community will take place on the purposely built charity.higorgeous.io website. Each Friday the team will take the charity with the most votes and make a donation.

The team may add organizations that follow the goals, mission, and merit

creating partnerships that will help expose Gorgeous and the wonderful projects, we are working on.

Additionally, charities may apply to be added to our voting by submitting their detail at charity.higorgeous/charity.

However, the decision to where donations are sent is solely on the majority vote from within the Gorgeous community.

PROOF OF DONATIONS

A live screen recording in addition to receipts will be listed across the Gorgeous social media accounts. As the project grows, the hope is to stream a live chat with the charities.

EXEMPT FROM PAYING FEES

To ensure Gorgeous makes the largest impact with donations, the charity wallet has been filtered out of the paying transaction fees.

WALLET: 0X559ACE6C43266065D0C5EBE7CF18C33E648AAA6E

PROJECT WALLET

The project wallet will facilitate the operational efforts in growing Gorgeous.

In addition, tokens may be swapped and sent to other wallets to cover the costs of projects, expenses, extending the team, and rewarding individuals in the Gorgeous community that go beyond the call of action. At all times, we will document expenses in a monthly report.

At times, the project wallet might burn Gorgeous tokens to a dead wallet, implemented to be beneficial and rewarding for those engaged for the long term.

KEY FOCUS

- Marketing to extend the exposure and popularity of Gorgeous.
- Incentives to those in the community that goes beyond the call of duty.
- Fund the development of the use cases and ongoing costs in maintaining them.
- Extending the team that is employed to develop the use cases.
- Out of pocket expenses relating to the Gorgeous token and its projects.

EXEMPT FROM PAYING FEES

To ensure the growth of Gorgeous to its fullest, the project wallet has been filtered out of the paying transaction fees.

TEAM WALLET

EXPERIENCE & PASSION CAN'T BE FAKED

Gorgeous is a collective of influential individuals from a wide range of sectors, experienced in developing scalable digital products and committed to championing positive action in the cryptocurrency space.

Comprising of block-chain architects, full-stack developers, and marketers, the Gorgeous team.

HAS THE TEAM REVEALED THEIR IDENTITIES?

Due to the volatility of the crypto space, traders can get very emotional about price movement, and doxxing exposes team members to additional risk. For this reason, team members are still waiting for the project to build before making their identities public.

Rest assured that this entire team is in it for the long haul, and as Gorgeous grows, team members will be

comfortable sharing their identities.

We will be available across our social channels and a part of the community chats in Telegram to answer any of your questions.

EXEMPT FROM PAYING FEES

No, the team wallet is held to the same fee structure when swapping tokens.

USE CASE

The creation of Gorgeous as a token came about to address two simple questions:

- **How do we fund the development of multiple innovative solutions to real-world problems?**
- **How do we manage the expense involved in maintaining these projects?**

In the world of business, this is quite simple. Find investors that align with your proposal and raise funds.

However, when the projects have no intention of monetization to ensure the largest impact for positive change, the pitch becomes harder to sell.

Thus Gorgeous was created. Using smart contracts as a token, we now have the ability to fund not only the projects but also yield a return to a community that believes in our cause.

THE PROJECTS

The team currently has two projects in the proposal and mockup stages. The first is a pay-it-forward app that will serve as a bridge between those in need and our self-funding charity wallet. This project, whilst ambitious, will be deployed in Beta in early September and will provide a proof case for our abilities as a team.

In planning for a long time and the discussion topic over many beers, the second, far more ambitious, is CloudLabs.

Whilst all projects will run as SaaS, the code base will be open-source and available to fork for your own deployment.

As Gorgeous grows as a token and our resources are extended, we would like to extend Pro Bono services to charities and organizations. If the project's scope is not possible, we will be happy to offer consultancy services, Pro Bono.

PAY-IT-FORWARD

The pay-it-forward application is a service that allows funds collected from the charity wallet to be allocated and provide daily essentials to those in need.

Whether it is a coffee, a meal, baby supplies, groceries, accommodation, prescriptions, school fees, or a bus fare, this project aims to impact individuals positively.

At first, we will partner with local charities and organizations in four cities across the USA, Europe, Oceania, and Asia to supply the application to those in need, focusing on individuals who are:

- **Homeless.**
- **Without income.**
- **Escaping domestic violence.**
- **A family in need.**

MAKING FUNDS AVAILABLE

Funding the monies from our charity wallet to FIAT currency, making it available to the businesses, will happen via several smart contracts that will automate the withdrawal of fees

collected from token trades and send to an exchange held by Gorgeous. At this point, the funds will be converted periodically to FIAT currency and added to a Stripe account.

To connect the business in the most simple way possible, each service user will have a digital card issued from Stripe that will make funds available through the NFC function of their smartphone. For special cases, we will also issue valued gift cards to the organizations to hand out. Transactions will be made available online to give transparency to our community.

To ensure the funds allocated are spent on items intended, we will be restricting merchant codes to exclude gambling, bars, etc. Further verification will be applied by calculating the risk of certain merchant codes, applying a confirmation by way of OCR on the receipt.

TIMELINE

Our initial Beta release will be released in early September 2021. Wireframes and full technical specs will be available to download from July 1st, 2021.

CLOUDLABS

CloudLabs has been a pipedream of this team for a long time now.

It's ambitious, challenging, and will endeavor to change millions' lives by making medical research in the lab available across the cloud.

Stage one

A single robotic laboratory in a confined enclosure. An IDE will be created to support the functions required to operate the experiments remotely.

During our testing, we expect to;

- **Perform experiments from multiple machines remotely.**
- **Maximize the efficiency of procedures to perform more experiments per day.**
- **Limit failures of the equipment and IDE to a minimum.**
- **Pass a focussed test undertaken by medical researchers at all levels, including students, educators, and professions.**

Stage two

Once the initial concept is complete, the next stage will have us redesign the enclosures for optimal manufacturing. When complete, multiple laboratories

will be created, and CloudLabs will become available for Beta testing to a selected group of medical researchers.

Stage three

Upon completing the Beta testing, CloudLabs will roll out to the public when the bugs have been fixed. The platform will also initiate monetization with minutes in each environment being charged in Gorgeous tokens. At this stage, no matter who you are around the world, whether you are studying online or traveling as a professional, your medical research will be available for you, no different from how software developers use Docker or Kubernetes.

Stage four

The final stage in our proposal will be to release shared environments similar to GitPod. Now our users will build on their research from their peers in private environments or publically in an open-sourced environment.

Like GitHub, users will host their code with PR's, forks, and source version control.
